

and 11 to bring the application into compliance with 37 CFR 1.81.

IN THE SPECIFICATION:

Page 3, between lines 34 and 35, add the following:

--Fig. 1 is a sectional view of an intraocular implant comprising an optical part made entirely of flexible material and a haptic part made entirely of relatively rigid material; and

Fig. 2 is a section view of an intraocular implant similar to that of Fig. 1 in which the optical part is made of alternating strips of flexible and rigid material and the haptic part is made of rigid material.--

Page 10, replace the paragraph beginning on line 31, bridging page 11, as follows:

--The process of the invention for structural modification by selective rigidification, described above, makes it possible to obtain implants featuring haptic parts having attachment members of various geometric shapes, attachment members having damping elements, or flat haptic parts or other haptic parts of any desired configuration. The haptic parts of the intraocular implants of Figs. 1 and 2 comprise attachment members.--
